Professional Summary

High-velocity full-stack developer who leverages AI coding agents (Claude, AntiGravity, GitHub Copilot) to ship production-grade web applications at 3–5× typical development speed. Currently studying Data Science at USTHB while running a freelance web development practice that has delivered **5 production applications** to **3 clients** across education, healthcare, and creative industries. Built a portfolio site from zero to production in **under 24 hours**, then redesigned it completely in another 24 hours. Combines mathematical training (Linear Algebra, Algorithms) with modern frontend engineering to build high-performance, SEO-optimized products. Trilingual: Arabic (native), French (fluent), English (fluent).

Technical Skills

Frontend	React 19, TypeScript 5.9, Next.js, Vite 8, HTML5, CSS3, Responsive Design
Animation & 3D	GSAP 3.14 (ScrollTrigger), Three.js / @react-three/fiber, Framer Motion, Lenis, Canvas API, WebGL
Backend & DB	Supabase (PostgreSQL, Auth, RLS, Edge Functions), Firebase, Node.js
Mobile	React Native (Expo)
Data Science	Python, NumPy, Pandas, Matplotlib
DevOps	Vercel, Git/GitHub, CI/CD (auto-deploy on push), Hostinger
Design	Figma, SEO (JSON-LD, Open Graph, Sitemaps, Structured Data)
AI Workflow	Claude Code, AntiGravity (MCP for Supabase/Notion), GitHub Copilot
Languages	Arabic (Native), French (Fluent), English (Fluent)

Production Projects

Ibrahim Benabida — Creative Portfolio2026

React 19 · TypeScript · Vite 8 · GSAP · Three.js · Lenis

<https://ibrahim-benabida.vercel.app>

- Built a premium dark-themed portfolio from scratch in **under 24 hours**; redesigned entirely the next day
- Engineered a **horizontal-scroll project gallery** with pinned GSAP ScrollTrigger, dot-grid Canvas background, and floating 3D-projected “WORK” text on sine-wave paths
- Implemented a **unified render loop** (single `requestAnimationFrame`) synchronizing card translation, letter animation, and canvas rendering to one lerped progress value—eliminating all mobile scroll desync
- Replaced per-frame `arc()` rendering (~756 circles/frame) with an **offscreen CanvasPattern fill**, reducing mobile CPU overhead by ~90%
- Built an interactive **Three.js wireframe icosahedron** hero with `@react-three/fiber`, lazy-loaded via `React.lazy()` + `Suspense`
- Full **SEO optimization**: JSON-LD Person + ProfessionalService schemas, Open Graph, Twitter cards, geo tags, hreflang (EN/FR/AR)

Smart Residency — University Residence Management

2026

React Native (Expo) · Supabase · TypeScript

<https://smart-residence-two.vercel.app>

- Designed and built the **first digital management system** for the Abdelkader Belarbi University Residence in Algiers
- Architected a **multi-role admin dashboard** with 4 roles (Director, Sports, Maintenance, General), each scoped by Row-Level Security (RLS) policies in Supabase
- Built a **sports facility booking system** with department-exclusive accept/reject workflows
- Implemented **full Arabic RTL support** across all UI components with Amiri font integration
- Created an **HTML-to-PDF reporting engine** using `html2canvas` for pixel-perfect Arabic typography in admin reports

USTHB Data Science ICT Projects Platform

2025–2026

Next.js · Tailwind CSS · PostgreSQL

<https://usthb-datascience-ict-projects.vercel.app>

- Built a student project management platform serving **400+ active students** in USTHB's Data Science department
- Implemented **project discovery, rating, and collaboration** features for academic works
- Server-side rendered with Next.js for SEO and fast initial loads

Abdou Oussama Benabida — Academic Research Portfolio

2026

React · Vite · Neo-Brutalist CSS

<https://abdou-oussama-benabida.vercel.app>

- Built a professional academic portfolio for a **PhD candidate in Mathematics at UQAM** (Montréal), featuring research publications on Calabi–Yau manifolds and spectral geometry
- Designed a **neo-brutalist design system** with custom CSS variables and responsive typography
- Full SEO optimization for academic discoverability with structured data

Tarek Graphics — 3D Designer Portfolio

2026

React · Framer Motion · Three.js · GSAP

- Delivered a premium portfolio for a professional 3D generalist/designer (freelance client)
- Dark-mode design with immersive project galleries and scroll-driven animations

Education

USTHB — University of Sciences & Technology Houari Boumediene

2025 – Present

License (L1) in Data Science — Algiers, Algeria

- **Algebra:** Vector Spaces, Linear Transformations, Matrix Operations
- **Analysis:** Differentiability, Taylor Series, Integral Calculus
- **Algorithms & Data Structures:** Complexity analysis, sorting/searching, recursive design
- **Probability & Statistics:** Foundational concepts for data modeling

Applied math directly to 3D coordinate transforms (Three.js), sine-wave projections (GSAP), and algorithmic performance optimization ($O(n) \rightarrow O(1)$ canvas rendering).

Certifications

- **Mimo — Full-Stack Web Development Certificate**

2022 (Age 15)

Freelance Experience

Freelance Web Developer

2025 – Present

- Delivered **5 production applications** to **3 clients** across education, healthcare admin, and creative portfolio niches
- Projects priced at **20,000–60,000 DA** based on design complexity, scalability, and feature scope
- Managed **end-to-end client relationships**: requirements gathering, design, development, deployment, and handoff
- All projects deployed with **production-grade SEO**, structured data, and performance optimization
- Concept-to-production turnaround: **1–5 days** using AI-augmented development workflows

AI-Augmented Development Methodology

I operate as an **AI-augmented developer**—using coding agents not as autocomplete, but as full engineering partners:

- **Architecture**: I define requirements, user flows, and constraints. AI proposes implementation plans I review and approve.
- **Pair Programming**: I direct AI agents through multi-file refactors, performance optimizations, and database schema design.
- **Quality Control**: I diagnose visual/performance issues (mobile scroll lag, animation desync, layout thrashing) and guide targeted fixes.
- **Deployment**: I manage Git workflows, Vercel auto-deploys, DNS, and production monitoring.

Result: Full production applications—from database schema to GPU-accelerated animations—shipped in days, not months.
